

PRODUCT INFORMATION SHEET

Power set III 18V

Product description

The set combines two batteries with different capacities, allowing you to match the power source to the type of work you are doing – lighter and short tasks or long-term, demanding work. The 4 A charger allows you to quickly replenish energy – the 2 Ah battery charges to 80% in about 30 minutes, and the 4 Ah battery in about 60 minutes.

Batteries:

- The light weight and dimensions contribute to a more comfortable.
- An advanced electronic module monitors battery performance to maximize performance and increase durability.
- Current short circuit protection improves the safety of operation and storage of the battery. Controlling the charge level of the cells extends their lifespan.
- The cells are made with the latest lithium-ion (Li-Ion) technology and ensure high energy efficiency, durability and reliability.
- The housing protected by rubber bumpers protects against mechanical damage.
- Operation from -18 °C to +50 °C possible.
- Charge level indicator.

4A Charger (HT2E242-C40):

- Charging 80% of the 2 Ah battery – approx. 30 min, 4 Ah – approx. 60 min.
- Electronic voltage and temperature monitoring module.
- Protections: overheating, short circuit, overcharging.
- Indicators to inform about the status of the charging process.

Characteristics

- Kit: 2Ah battery + 4Ah battery + 4A charger
- Li-Ion technology – high efficiency, durability and reliability.
- Protection: overheating, short circuit, moisture.
- Charge level indicator in both batteries.
- 4 A charger – fast charging: 2 Ah in 30 min, 4 Ah in 60 min.
- Electronic voltage and temperature monitoring module.
- Indicators to indicate the charging status.
